1. The following is an examiner's statement of reasons for allowance:

Prior art fails to teach and/or suggest coding the bits by determining whether a given bit is equal to zero and if not, coding the bit based on whether its coefficient is positive or negative, if the bit is equal to zero, determining whether the bit is zerotree root and if not, coding the bit based on whether the absolute value of its coefficients is less than or equal to a threshold value, and if the bit has a coefficient of the form of a zerotree root, determining whether the coefficient is less than the threshold value or if not, coding the bit one way and if so, coding the bit depending on whether or not the magnitude of all the descendents of the coefficients are less than the threshold value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

2. Claims 1-15 are allowed.
3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Jeong (US 6,393,060) is cited because the reference teaches coding/decoding apparatus and method designed to enhance the zerotree coding efficiency which is compatible with the existing DCT based coders.

Zandi et al (US 2002/0048405) is cited because the reference teaches ordering the series of coefficients and performing bit significance embedding on the transformed signals.

Sodagar et al (US 6,269,192) is cited because the reference teaches zerotree entropy encoding.
